

Real-time Temperature Monitoring & Alerting

Priority One's in-vehicle Mobile Resource Management (MRM) solution combined with our real-time temperature sensor helps organizations improve operations and reduce the risk of cargo loss. By monitoring temperature-controlled vehicle compartments using real-time temperature monitoring and alerting, businesses that transport food, beverages, chemicals and other temperature-sensitive cargo have the peace of mind of knowing that their valuable cargo is being monitored 24/7/365.

Customer Benefits

- Reduces loss due to open doors, refrigeration unit malfunctions, high temperature settings, etc.
- Increases response time with high/low temperature alert notifications
- Provides continual, real-time compartment temperature updates
- Enables up to 2 zones to be monitored per compartment
- Eliminates manual temperature checks, reducing labor time and simplifying driver responsibilities
- Automatically alerts designated recipients via email when a temperature alert occurs
- Capable of alerting more than one party, increasing response rates
- Monitors temperature-sensitive cargo after-hours, nights and weekends

With VeriVision's real-time temperature monitoring and alerting, Insituform prevented the loss of a single cargo load worth \$300,000.

Customer Use Case

Insituform Technologies, Inc is a leading worldwide provider of proprietary technologies and services for rehabilitating sewer, water and other underground piping systems without digging or disruption. Impressed with the basic VeriVision solution, Insituform also installed temperature sensors on its fleet vehicles. After only one month, Insituform's Tom Burbank received a text message on his cell phone, triggered by the Vericom system, that one of his vehicles was experiencing an unusually high temperature in the cargo bed, endangering the shipment. Within minutes, Tom dispatched his foreman to the truck's location. The temperature was corrected, and the cargo was saved.

"Had I not been immediately notified and able to get my Foreman on site quickly, the cargo loss would have been as high as \$300,000 for the single load," reported Tom.
